Product Design

In a fiercely driven market, companies are constantly challenged to innovate and produce new products with increased functionalities at reasonable cost, in a short time, catering to changing customer preferences. It is here, we offer quality expertise for the entire development life cycle right from concept design, product design, assembly design, assembly analysis and product packaging design.

Our team of professionals have the capability to transform ideas to a finished product after understanding the application needs and requirements of the customer. Using their immense knowledge, they give concrete shape to concepts keeping in mind factors such as functionality, manufacturabilities, servicability, reliability and aesthetics of the product.

Our service offerings cover the full range of Product Engineering disciplines, including:

- ◆ Industrial Design
- ◆ Mechanical Design
- ◆ Design validation
- ◆ Tooling Design
- ◆ Production Test Development

Our product design services have helped our clients reduce their time to market while maintaining high levels of quality. With us, clients can leverage our ability to provide unique customised solutions and reap the benefits of our strengths in:

- ◆ End-to-end Product Engineering Design
- ◆ Healthy team of domain specialists
- ◆ Wealth of Technology expertise
- ◆ Flexible delivery model to support client's projects.

By using our in-depth domain expertise and experience in a wide range of design technologies, clients can obtain an unparalleled advantage in maximizing their investment returns.
